

Installing a VIKING Emergency Pool Phone is as easy as 1-2-3

Step 1 Run the phone cable to the Emergency Phone Site

Step 2 Pre-Mount the Phone

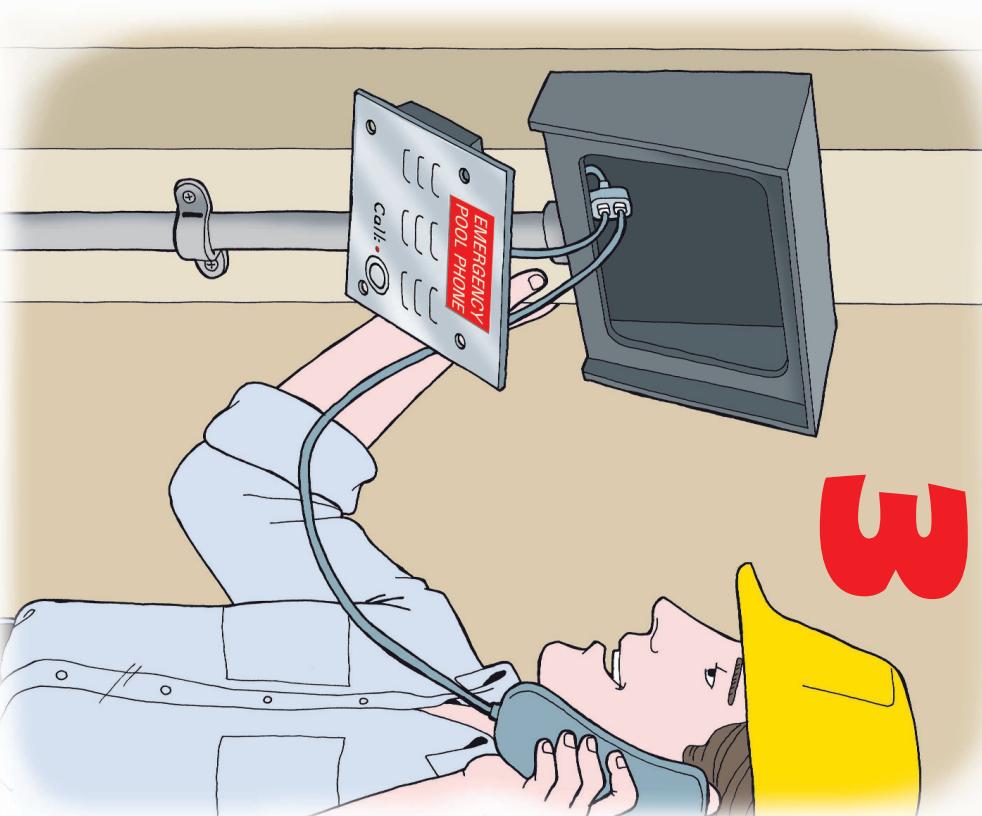

Step 3 Call VIKING for Automated Programming

The recorded announcement will ask you to enter the number the emergency phone should call when activated. Most often this should be "911." When you are done entering the number, hang up. VIKING will call the phone and program it for you.

Some state codes specify a distance requirement for pool emergency phones. Check with your local code authority before selecting the location for your pool phone. The emergency phone must be easily accessible in the event of an emergency.

Telephone cable is inexpensive, easy to run, and available from all and building supply stores. Most local building codes don't require conduit enclosure for phone cable (check your codes to be sure).

VIKING Emergency Phones are phone line powered and do not require additional power supplies or separate power wiring.

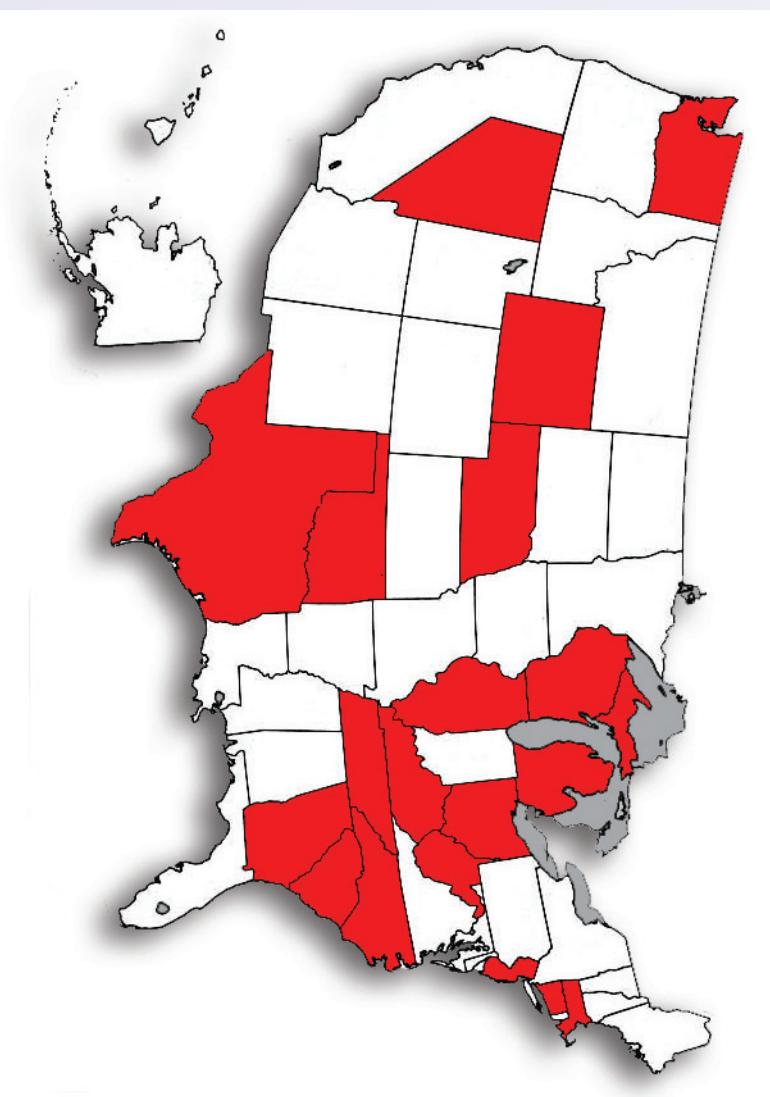

Some state codes specify a distance requirement for pool emergency phones. Check with your local code authority before selecting the location for your pool phone. The emergency phone must be easily accessible in the event of an emergency.

Surface mount VIKING Emergency Phones attach directly to a building wall or fence. Our stainless steel E-30-EWP can be flush mounted or surface mounted using our VE-5x5 box. The VE-5x5 can also be mounted on a VE-GNP gooseneck pedestal.

Safety Officials Know That a Poolside Emergency

Phone Saves Lives!

That's Why It's Mandatory Equipment in These States

The following is a list of states (in alphabetical order) requiring pool emergency phones. If your state is not listed *it does not mean you are exempt.* Please check with your local health department for guidance.

**Connecticut • Georgia • Illinois • Kentucky • Massachusetts
Michigan • Nebraska • Nevada • New Jersey • North Carolina
Ohio • Oklahoma • South Carolina • Texas • Tennessee
Washington • West Virginia • Wisconsin • Wyoming**

Nobody expects to have a pool emergency. But if an accident happens, you can't afford to waste time searching for a phone. Even if you keep a portable phone near the pool, you can't depend on it's reception or battery life during an emergency. That's why your state requires the installation of a permanent hard-wired phone near your pool—an **Emergency Pool Phone**

Ordinary telephones don't work well in pool environments because they simply weren't designed to withstand weather, water, and the long-term corrosive effects of chlorine.

VIKING EWP **Emergency phones** can handle the job. They're weather, vandal, and corrosion-resistant. They've proven their durability in tens of thousands of commercial and residential installations. Plus, they're easy to install.

Make sure your pool has all the safety equipment it needs by adding a **VIKING EWP** **Emergency phone**.

VIKING EWP Emergency Phones are so well protected from the environment that they even work when totally submerged. The EWP circuit board is totally encased in flexible urethane compound. That not only protects it from corrosion, but the flexible material resists cracking from expansion and contraction cycles. We use a mylar speaker cone and we hand solder all the connections and seal the push button switch and the LED with non-corrosive silicone.
